Thanks. I'm just about to go on the site walk. I figure this will take the rest of the day. It may be tomorrow before I can get you answers.

Hi Greg-

LDH has been working with our toxicology consultant, Dr. Luann White (Tulane School of Public Health), to assemble a health education document regarding radium and health in a FAQs format. We plan to consult with the CDC/ATSDR's health physicist, Dr. Paul Chorp, for input and, of course, coordinate with EPA and NOHD to have a consistent message. We have a few questions, particularly regarding public health concerns for the site. If you have any additional site-specific information you can provide to assist us in answering the questions below, please reach out via email. Or, if you prefer, my cell is 504-606-3189.

Thanks, Shannon Soileau

1. What is EPA's position on the "threat to public health?" We were provided with both a PowerPoint titled "Radium 226 Source Remediation" and the Draft Removal Action Memo. These two documents do not seem to align in terms of defining the threat.
 - a. <!--[if !supportLists]--><!--[endif]-->PPT: "Initial investigation found no immediate threat to public"
 - b. <!--[if !supportLists]--><!--[endif]-->Memo justifying removal: p 7 – Section III Threats to Public Health or Welfare... *The current conditions at the Site meet the following factors which indicate that the Site is a threat to the public health, welfare and the environment and a removal action is appropriate under section 300.415(b)(2) of the NCP.*

The current exposure rate from the Ra-226 at the Site is several times higher than the EPA acceptable exposure limit of 125 mR/quarter. In fact, the annual dose allowable for the general public can be exceeded at levels at the street or adjacent areas in less than 1 hour per day. The exposure rate measured by the post excavation survey was 1.5 mR/hr. An average of 1-hour exposure per day would result in an approximate dose of 135 R. That does not include exposure to naturally occurring radiation, medical treatments, and other man-made exposures.

EPA considers exposures exceeding twice background as unacceptable. The background for the New Orleans area is 0.005 mR/hr. Twice background is 0.010 mR/hr, for the acceptable activity. The 1.5 mR/hr detected by the gamma survey well exceeds that limit.

2. How far from the roadbed with the radiation source is elevated gamma radiation expected? Historically, now and during remediation?
3. How far should people stay away from the street during remediation?
4. During remediation, the radiation levels would be expected to increase. By how much? Estimate?
 - a. Should people stay in houses adjacent to Lowerline or Coolidge during remediation—approximately 20 feet from road
 - b. What will be done to minimize dust and dispersion of contaminated soil and dust during remediation?
5. What is the risk to pregnant women (fetus) - historically, now and during remediation

I'll be on a plane then. Go with the meeting.

I'm meeting our cleanup contractor. Targeting the week of May 13 for a start. That is dependent on getting the CR pieces in place.

Good morning to all:

Gregg

In efforts to develop Q&A's for Lowerline Street removal efforts, would it be possible to discuss drafting Heath Concerns Q&A on a conference call today about 11:00 am. The Q&A's will be used as handouts to those affected during Lowerline Street removal efforts.

Conference #: 202.991.0477
Code# 4994515

Please let me know if the time is ok?

Hey

Gregg Fife response below:

I'm meeting with our contractor, ER, tomorrow, 4/30, for a site walk. To allow ER to become familiar with the Site and begin making arrangements with vendors and subcontractors. It will only be a short visit. They indicated that they might be able to mobilize on May 13 to start. It could be one more week, depending on arrangements with vendors and the disposal companies.

With the above information, please let me know the soonest a draft can be available to schedule a conference call. It may be useful to allow few days for EPA management to review as well.

Fyi: May 7 and 8, 2019 I will be on site travel.

Thanks,

Janetta Coats

Hi Janetta- LDH has been in touch with the City- both the Public Works and Health Depts. We will draft FAQs on radium-226 and health and get input from the city health dept. When do you need a finalized document? And, when will the multi-agency coordination call take place? It might be helpful for us if we could have the call before finalizing the FAQs.

Thanks, Shannon

Good afternoon,

It will be useful to include both ATSDR, LDH, and City of New Orleans regarding health issues/concerns to make sure same message is being shared.

In speaking with ATSDR/Jennifer Lyke; and LDH/Shannon Soileau, a Frequently Q&A draft will be developed for review and discussions.

The timeline need to be confirmed to make sure appropriate outreach materials/information is provided to the community prior to removal efforts.

Cheryn, Shannon Soileau will likely give you as soon as possible to get a feel of previous outreach efforts.

Jeff, appreciate the attached information.

EPA confirming location for the information repository.

EPA will schedule a conference call to discuss timelines/joint outreach efforts and health education.

Thanks,

Janetta Coats

Hi Ms. Janetta,

Left you a message. I'm sorry, I understood that EPA would be drafting the talking points for the City to use re: this issue so I apologize for the delay.

I've started the attached for review.

I can engage the City Health Director if needed but we were planning on the DPW Director being the spokesperson.

EMAIL FROM EXTERNAL SENDER

Good afternoon to all:

In efforts to conduct community outreach for Lowerline removal efforts, can you please provide me contact information/emails/phone numbers for those that you feel should be included on the communication/notification strategy.

Being mindful the attached flier was handed out in the community previously (no community interest at that time) once the removal efforts begin there will likely be many questions that need answers.

The removal action will involve the excavation, removal and offsite disposal of contaminated soil and road base on Lowerline Street near the intersection of Coolidge Court. (Gert Town).

In working together to make sure the community is not alarmed we want to reach out before removal efforts begin to make sure all interested parties are aware:

Local Elected Officials
cleanup efforts timeframe
In the event of emergency
keeping their family/pets safe
where to get information
Health concerns
spokesperson
Traffic impact
Health Services

Please provide information the soonest!

Thanks,

Janetta Coats
